

Date : 13 Nov 2008

Time: 06:30 PM

Location: Microsoft Singapore

Light dinner will be served before session.

Session Agenda

19:00 – 20:30

Authentication and Authorization in MOSS 2007

Murthy from Vismaad will be presenting the various techniques available, including a demo on ASP.NET membership provider with SQL 2005. He will also cover on extending collaboration to external parties.

Firstly, the discussion will be on how to make use of the different authentications supported to extend to external collaboration. This will then be followed by customization/restricting of personal sites for external collaboration with web parts.

After the demo, Murthy will proceed to look at the ISA Server 2006's support in authentication for internet facing SharePoint collaboration sites. He will wrap up the session with another demo on how to customize/brand the ISA login screen.

About the speaker:

Mariyappan Kaliyamurthy has 15 years of experience in the IT industry - developing solutions for various businesses including the Healthcare Sector, Semiconductor Production and Testing Departments and Logistical Organizations. Murthy possesses strong technical skills in Microsoft Windows SharePoint Services (WSS 3.0) & Microsoft Office SharePoint Server 2007 (MOSS), Visual Studio 2005 & Visual Studio 6.0, MS SQL Server 7.0/2000/2005, ASP, MTS & MSMQ powered by COM/DCOM Programming. He also has a very keen interest in working with Microsoft technologies in the areas of collaboration, portals, communication and networking.

SharePointPROs.SG T-Shirt

SharePointPROs.SG T-Shirt is ready for collection for those who have attended the launch in October 2008.

Community Technology Update 2008

Community Technology Update (CTU) 2008 is the second technology update for 2008, jointly brought to you by the local User Groups. The theme of CTU 2008 revolves around .NET 3.5, SQL Server 2008 as well as Windows Server 2008 - And for the first time in a community event, we're putting together a mini Hands-On Lab, so that you can learn about Data Mining in SSAS 2008, as well as put together applications which can consume models built in SSAS 2008.

For more details go to <http://www.sgdotnet.org/events/CTU2008/default.aspx>

Windows SharePoint Services in Azure

Azure allows developers to create applications that run in the cloud to create web or mobile applications that extends the value of on-premises applications. In the future, developers will have access to SharePoint functionality in the Azure Services platform. To learn more about Azure, go to <http://www.azure.com>
